Highly numerate final and penultimate year PhD students with a research interest in mathematical finance are invited to submit their work by 2 December 2013, with prizes being announced by 14 January 2014.

We invite submissions not just in the field of mathematical finance itself, but also in other areas where the PhD research has involved substantial work with a possible connection to quantitative finance and investment. This includes subjects such as mathematics, statistics, economics, machine learning, engineering, and physics.

Students who wish to apply should submit an electronic copy of their dissertation. We stress that this need not be the submitted version of their PhD, as students near to submission are also eligible to apply.

If you plan to submit your work or would like to discuss whether to enter this competition, please contact Dr Steve Satchell: ses11@cam.ac.uk. The evaluation of the submissions will be carried out by a panel of academic advisors and G-Research representatives.
